

### AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application:

#### Listing of Claims

1. (Currently Amended) A method for providing an authorization to a user during a telephone connection being established between a first user and a second user in a telecommunications system comprising one or more interconnected telecommunications networks, said method comprising the steps ~~step~~ of:

i) setting up the telephone connection between both the first and second user using their subscriber identity numbers based on authorizations appointed to said first or second user; ~~and further characterized by the steps of~~

ii) receiving during the telephone connection being established a service request from one of said first user or second user; and

iii) appointing based on said service request received during the telephone connection being established at least one authorization to said other of said first user or second user.

2. (Currently Amended) The method ~~Method~~ according to claim 1, wherein ~~characterized in that~~, said authorization comprises the step of

iv) preventing based on said authorization the establishment of a future telephone connection between said first user and second user by said one of said first user or second user.

3. (Currently Amended) The method ~~Method~~ according to claim 1, wherein ~~characterized in that~~, said authorization comprises the step of

v) allowing based on said authorization the establishment of a future telephone connection between said first user and second user by said other of said first user or second user.

4. (Currently Amended) The method ~~Method~~ according to claim 1, ~~wherein characterized in that~~, said authorization comprises the step of  
vi) allowing based on said authorization said other of said first user or second user access to information sources kept by said one of said first user or second user.

5. (Currently Amended) The method ~~Method~~ according to claim 1, ~~wherein characterized in that~~, said authorization comprises the step of  
vii) allowing based on said authorization said other of said first user or second user to provide information to said one of said first user or second user.

6. (Currently Amended) The method ~~Method~~ according to claim 1 ~~anyone of the preceding claims~~, further comprising ~~characterized by~~ the step of  
viii) entering upon receipt of said service request from said one of said first user or second user the subscriber identity number corresponding with said other of said first user or second user on at least one authorization list; and  
ix) consulting said authorization list when a future telephone connection is being set up by said other of said first user or second user.

7. (Currently Amended) A telecommunications system comprising one or more interconnected telecommunications networks, arranged for establishing a telephone connection between a first user and second user using their subscriber identity numbers based on authorizations appointed to said first or second user. ~~wherein characterized in that~~, at least one of said interconnected telecommunications networks  
is arranged in receiving a service request during the telephone connection being established from one of said first user or second user; and  
is arranged in appointing, based on said service request, at least one authorization to said other of said first user or second user.

8. (Currently Amended) The ~~[[A]]~~ telecommunications system according to claim 7, wherein ~~characterized in that~~, said at least one of said interconnected

telecommunications networks is arranged in preventing<sub>1</sub> based on said authorization<sub>1</sub> the establishment of a future telephone connection between said first user and second user by said one of said first user or second user.

9. (Currently Amended) The [[A]] telecommunications system according to claim 7, wherein ~~characterized in that~~, said at least one of said interconnected telecommunications networks is arranged in allowing<sub>1</sub> based on said authorization<sub>1</sub> the establishment of a future telephone connection between said first user and second user by said one of said first user or second user.

10. (Currently Amended) The [[A]] telecommunications system according to claim 7, wherein ~~characterized in that~~, said at least one of said interconnected telecommunications networks is arranged in allowing said other of said first user or second user access to information sources kept by said one of said first user or second user.

11. (Currently Amended) The [[A]] telecommunications system according to claim 7, wherein ~~characterized in that~~, said at least one of said interconnected telecommunications networks is arranged in to provide information to said one of said first user or second user.

12. (Currently Amended) The [[A]] telecommunications system according to claim 7, wherein ~~anyone of the claims 7-11, characterized in that~~ said at least one of said interconnected telecommunications networks is arranged in

entering<sub>1</sub> upon receipt of said service request from said one of the first user or the second user<sub>1</sub> the subscriber identity number corresponding with said other of the said first user or second user on an authorization list; and

at least one of said interconnected telecommunications networks is arranged in consulting said authorization list each time a future telephone connection is being set up by said other of the first user or second user.

13. (Currently Amended) The [[A]] telecommunications system according to claim 12, wherein ~~characterized in that~~, said authorization list is contained in a database present in said at least one of said interconnected telecommunications networks.

14. (Currently Amended) The [[A]] telecommunications system according to claim 12 ~~or 13~~, wherein ~~characterized in that~~, said interconnected telecommunications networks are arranged in synchronizing their respective lists.

15. (Currently Amended) A telecommunications network interconnected with other telecommunications networks in a telecommunications system, arranged for establishing a telephone connection between a first user and second user using their subscriber identity numbers based on authorizations appointed to said first or second user, ~~characterized in that~~ said telecommunications network

is arranged in receiving a service request during the telephone connection being established from either one of said first user or second user; and

is arranged in appointing<sub>1</sub> based on said service request<sub>1</sub> at least one authorization to ~~said other~~ another of said first user or second user.

16. (Currently Amended) The [[A]] telecommunications network according to claim 15, wherein ~~characterized in that~~, said telecommunications network is arranged in

entering<sub>1</sub> upon receipt of said service request from said one of the first or second user<sub>1</sub> the subscriber identity number corresponding with said ~~other~~ another of the first user or second user on an authorization list; and

in consulting said authorization list each time a future telephone connection is being set up by said other of the said first user or second user.

17. (Currently Amended) An authorisation device in a telecommunications system, said telecommunications system comprising one or more interconnected telecommunications networks, arranged for establishing a telephone

connection between a first user and second user using their subscriber identity numbers, ~~characterized in that~~ said authorisation device being ~~[[is]]~~ arranged in receiving a service request during the telephone connection being established from one of said first user or second user; and

is arranged in appointing based on said service request at least one authorization to ~~said other~~ another of said first user or second user.

18. (Currently Amended) Storage means in a telecommunications network interconnected with other telecommunications networks in a telecommunications system arranged for establishing a telephone connection between a first user and second user using their subscriber identity numbers based on authorization appointed to said first or second user, ~~characterized in that~~ said storage means are capable of arranging and maintaining a database containing an authorization list and ~~are capable~~ in entering, upon receipt of a service request from said one of the first user or second user, the subscriber identity number corresponding with another ~~said other~~ of the said first user or the second user on said authorization list.

19. (Canceled)
